## Mountain Chickadee

1 mi. N + 2 mi. W Crockett Plk., 3800 ft., Lake Co., Calif.

20 May

Saw first chickadee of trip (see Journal) in a black oak - tried squeaking at it but it showed little effect. I got close enough to shoot w/  $\frac{1}{2}$  load but missed. The bird then moved off calling constantly and before I could get another shot at it it flew to the top of a large Ponderosa pine + then disappeared.

22 June

Telephone Campgrounds, ~~2010~~ 2010 m,  $1\frac{1}{2}$  mi N,  $\frac{1}{4}$  mi W Black Butte, Glenn Co., Calif. [T. 22 N, R. 9 W, NW  $\frac{1}{4}$  sec. 21]

Lots of chickadees here with many calling - I haven't heard a lot of songs.

22 June

$\frac{1}{4}$  mi N Black Butte, 2080 m., Glenn Co., Calif. [T. 22 N, R. 9 W, NW  $\frac{1}{4}$  sec. 27]

Shot a pair of chickadees here (with 1 shot) and also collected 7 nestlings from a nest which was undoubtedly theirs (see Journal).

22 June

$\frac{1}{4}$  mi E Anthony Plk., 1950 m, Mendocino Co., Calif. [T. 23 N, R. 10 W, SW  $\frac{1}{4}$  sec. 15]

There seem to be fewer chickadees here than elsewhere today, although this may be because we got here late in the day.

Songs of all birds heard today consist of 3 descending notes ("3 blind mice" according to Susan Kaiser)

A. Good  
1980

## Mountain Chickadee

1/4 mi. E Anthony Pk., 1950 m., Mendocino Co., Calif.  
[T. 23 N, R. 10 W, SE 1/4 sec. 15]

23 June

Chickadees seem more common this morning than they did last night (not surprising). Birds continue to sing "3 blind mice" but there doesn't seem to be a lot of singing going on - only once in a while do I hear a bird singing in the distance and then ~~and~~ sometimes the song consists of only the first 2 notes.

I have come to the realization that chickadees are hard to ~~retrieve~~ retrieve from the upper branches of a fir tree after being shot.

8 mi. N + 6 mi. W North Yolla Bolly ~~Stn.~~ 1480 m.,  
Trinity Co., Calif. [T. 25, R. 11 W, NW 1/4 sec. 3]

24 June

Arrived here ca. ~~1730~~ 1730. Though I hear a few calling (no songs), the birds don't seem very common. This could either be an effect of the habitat (see Journal) or the time of day or both.

25 June

Chickadees still <sup>relatively</sup> scarce (though by no means rare) → probably a function of too few stands of large trees. Though the birds seem to prefer large trees, I came upon one pair in 3 m. tall replanted Ponderosa pine.

Found a nest w/ 8 yg. in a Fir (ca. 1 m. DBH) - the hole was 1.75 m from the ground and the cavity was <sup>(ca. 20 cm. deep) lined w/ feathers</sup> behind a piece of bark which was easily removed by pulling. The

D. A. Good  
1980

Mt. Chickadee

8 mi. N + 6 mi. W North Yolla Bolly Mtn., 1480 m., Trinity Co., Calif. [T. 28 N, R. ~~10~~ W, <sup>NV</sup> sec. 4]

25 June (cont) yfg. were collected (+ were 6-8 days old). - some were used for ~~phototyping~~ <sup>haematotyping</sup> + tissues were taken from others (see catalogue).

Birds here do not sing "3 blind mice"; the notes are instead 1 high + 2 lower, w/ the last 2 at the same frequency.

Sounds more like a regular chickadee.

26 June Went out collecting chickadees in morning - ran into 1 pair up in high conifers that refused to come down low enough to shoot but seemed very interested in my owl imitations. Most chickadees at this time of year seem to be in family groups.

$\frac{1}{2}$  mi. S + 1 mi. E Good's Mtn., 915 m., Shasta Co., Calif. [T. 29 N, R. 10 W, N  $\frac{1}{2}$  sec. 9]

26 June Collected the only a chickadee I saw here - it responded to my being mobbed by several other small passerines (see journal). This bird had the feathers missing from the top of its head and this did not seem to me to be the result of my shooting it  $\rightarrow$  possibly an old injury? <sup>Collected from a Black oak - evergreens nearby.</sup>

$\frac{1}{2}$  mi. S + 1 mi. W Scott Mtn., 1620 m., Trinity Co., Calif. [T. 39 N, R. 7 W, SE  $\frac{1}{4}$  sec. 5]

27 June Chickadees fairly numerous here but not exceptionally so. Song similar to Yolla Bolly site (perhaps <sup>perhaps not</sup> 3rd note a slight bit higher than the 2nd.) I only heard ~~one~~ one song.

Chickadees seem to respond more to owl imitations, etc than 4.

D.A. Good  
1980

~~Chickadee~~  
Mt. Chickadee

1 1/2 mi. N + 3 mi. W Eaton Pk. 1650 m., Siskiyou Co., Calif.  
[T. 40N, R. 10W, SW 1/4 sec. 14]

28 June

28 June

Chickadees not common here. I didn't manage to collect any though I heard a few in the distance and saw 2 too high to collect. Song here "normal" - 1 high, 2 lower + at same pitch as each other.

End of 40N54, 1 1/2 mi. N + 2 1/2 mi. W Eaton Pk., 1830 m.,  
Siskiyou Co., Calif. [T. 40N, R. 10W, SE 1/4 sec. 14]

29 June

This locality is only about 1/2 mile up slope from the last one so it is not surprising that the birds still sing a "normal" song. Bob found a nest in a fir(?) stump about 1 1/2 m. off the ground. DBH - 25 cm., Diameter of hole ca. 3-4 cm. Depth of cavity - 4-5 cm. - nest chamber well back into stump. Bob cut the hole larger + reached in. There were 7 newly hatched yg. + 1 egg which it was obvious was not going to hatch. I had shot the ♀ so I left the ♂ to take <sup>care of</sup> ~~the~~ the yg. He appeared while we were still there + was a bit taken aback by the reconstructed hole. He eventually entered however + we left him to it.

entered + left not  
3 times while it  
entered but never  
it rid of food  
it was carrying

Thompson Ridge, 1 mi. S + 3 mi. W Pyramid Pk., 1580 m.,  
Siskiyou Co., Calif. [T. 18N, R. 6W, NW 1/4 sec. 10]

30 June

Chickadees quite common but quiet after early <sup>mid</sup> morning. Song here normal. I had one flock very excited about my Pygmy owl call but, as seems to be very common, they would not come down low enough to shoot. Perhaps I should ~~hide~~ <sup>hide</sup> myself better.

A. Good  
1980

## Mt Chickadee

N Slope Whaleback, 9 mi. N + 5 mi. E summit Mt. Shasta,  
1800 m., Siskiyou Co., Calif. [T. ~~43~~ N, R. ~~3~~ 2 W, SE  $\frac{1}{4}$  sec. 20]  
43

2 July

Got here late in afternoon when birds are usually quiet. However there are very large numbers of Chickadees apparent anyway. Probably a function of their preference for small conifers.

3 July

Chickadees very common, especially in younger stands of firs mixed w/ chaparral vegetation. Song seems normal although Bob Zink thinks that the last note is a bit higher than the second. This may be true but I can't decide one way or the other.

Chickadees vary in their response to pishing, etc. If they see you, they <sup>often</sup> tend to stay farther away than do other spp. such as juncos, warblers, kinglets, etc. A common occurrence is to have them fly back + forth outside of gunshot range in the tops of large trees while scolding.

They <sup>often</sup> respond to Pygmy owl imitations interspersed w/ pishing or to a ~~whistled~~ <sup>whistled</sup> imitation of their song. This varies w/ time of day and, of course, w/ individual.

W slope Whaleback,  $8\frac{1}{2}$  mi. N + 2 mi. E. Mt. Shasta, 2050 m.,  
Siskiyou Co., Calif. [T. 43 N, R. 3 W, SW  $\frac{1}{4}$  sec. 26]

4 July

Chickadees also very common here (only ca. 3 mi from last locality). Song same as last locality. Bob + I separately ran into the same chickadee in the chaparral several hundred ~~ft~~ m. from the nearest live trees. Lots of dead snags around.

A. Good  
1980

Mtn. Chickadee

Spencer Creek, 1230 m., 2 mi. N + 3 mi. E Buck Mtn., Klamath Co., Oregon [T. 39 S, R. 6 E, SW  $\frac{1}{4}$  sec. 2]

~~July~~ 6 July I was sick so paid little attention but Chickadees fairly numerous. There was some controversy between Bob + Susan as to whether they were Mtn. or Black-capped.

7 July Controversy solved today - Bob collected 2 chickadees - they were Mtn. Song here "normal"

Howard Prairie Campground, ca. 4 mi. W Brush Mtn., Jackson Co., ~~Or~~ Oregon

8 July Song normal.

11 mi. S + 2 mi. W Mt. McLaughlin, 1430 m., Jackson Co., Oregon [T. 38 S, R. 4 E, SW  $\frac{1}{4}$  sec. 4]

9 July Only ran into 1 family group but didn't collect any for fear of shooting in the direction of the others out collecting. Song normal.

Near Rye Spring, 2 mi. S + 2 mi. W Mt. McLaughlin, 1500 m., Jackson Co., ~~Or~~ Oregon [T. 36 S, R. 4 E, NE  $\frac{1}{4}$  sec. 28]

10 July Attracted several on different locations by imitating Pygmy Owl. also attracted Chestnut-backed Chickadees which seem to be living in sympatry (I saw 1 single + 1 pair this morning as well as several mt. Chickadees). At one point I shot 3 chickadees within a few seconds + a few feet of each other - (2 Mtn. + 1 Chestnut-backed Chickadees)

A. Good  
1980

Mt. Chickadee

1 mi. S +  $\frac{1}{4}$  mi. E Odell Butte, 1580 m., Klamath Co., Oregon  
[T. 24 S, R. 7 E, SW  $\frac{1}{4}$  sec. 26]

11 July Song normal. Chickadees very common here but I refrained from collecting any since Bob only had 5 left on his Oregon collecting permit + I decided to save them for a more distant locality. Bob collected 1 ♀ (DAG 142).

Steens Mtn, Harney Co., Oregon

12 July - I have seen no decent Chickadee habitat here in any of the places we have been (see journal) - no conifers except Juniperus at intermediate elevations.

15 July

Martin Creek Ranger Station, 2060 m.,  $\frac{1}{2}$  mi. N + 1 mi. E  
Chocolate Mtn, Humboldt Co., Nevada [T. 44 N, R. 39 E, NW  $\frac{1}{4}$  sec. 24]

Apparently, mtn. Chickadees are not as restricted to conifers as I thought - Bob collected 2 juvenile birds from a family group here in aspen forest. No conifers to any significant degree for miles.

16 July

Saw an adult in the same place Bob got the juveniles yesterday - probably a parent. It did not cooperate so I was unable to collect it.

$\frac{1}{2}$  mi. N + 1 mi. W Eraser ~~Mtn~~ Mtn, 2150 m., Ventura Co., Calif. [T. 8 N, R. 20 W, NE  $\frac{1}{4}$  sec. 15]

24 July

Chickadees common. S. Kaiser heard the territorial song + said it was of the normal type. Though one would expect more juv. than ad. birds 6 out of 7 we collected were adult.

A Good  
1980

## Mtn Chukadee

1½ mi. N + ½ mi. W Frasier Mtn., 1720m., Ventura Co., Calif. [T. 8N, R. 20W, SE¼ sec. 9]

25 July I wanted to see if chukadees occurred in the extensive stands of piñon pine in this area rather than only in the Jeffrey pines I collected in yesterday (only at higher elevations). Indeed they do, + quite commonly. This means that their potential range is much greater than it otherwise would have been. I heard several songs today of varying types. Some sounded "normal", others had the last note possibly a shade higher, others (prob. yg birds) quavered considerably. One bird sang a 4 note song - - - -.

Angeles Natl. Forest (NW portion), Los Angeles Co., Calif

25 July (cont) The wildlife biologist at Sanger RS said that mtn chukadees are common in the Sawmill mtn region in the N part of the forest. If so, it is not shown by Behle or Grinnell + Miller. Tomorrow we will find out.

Sawmill Campground, 1550m., 1½ mi. N + ½ mi. E Burnt Pk., Los Angeles Co., Calif. [T. 7N, R. 16W, NW¼ sec. 15]

26 July Chukadees here (not mentioned by Grinnell + Miller) though only moderately common. Sympatric w/ Plain Titmouse which is very common. ~~There~~

A. Good  
1980

Mtn. Chickadee

1 1/2 mi. N + 1/4 mi. W Burnt Pk., 1480 m., Los Angeles Co., Calif. [T. 7N, R. 16W, NW 1/4 sec. 9]

26 July  
(cont)

Lots of chickadees here (one was 14 gms!). Birds seem to be traveling in flocks (prob. family groups)

Messenger Flat Campground + Lightning Pt. Campground, near Mt. Gleason, Los Angeles Co., Calif.

27 July

Gunnell + Miller show an extensive area of chickadee range in this Natl Forest but from what I have seen, the potential habitat is much more spotty. Collected 2 at Messenger Flat in a rather small area of pines. S. Kaiser heard several others. Lightning Pt has a much more extensive stand of conifers + here I got 4. These were all solitary birds rather than in small flocks as most of the birds on this trip have been - an interesting fact in view of this is that 3 out of the 4 solitary birds were adult whereas many of the flocking birds are juv.

1 1/4 mi. N + 1/4 mi. E Mt. Baden-Powell, 2070 m.,

Los Angeles Co., Calif. [T. 3N, R. 8W, NW 1/4 sec. 6]

28 July

Chickadee pie! We got 14 (I got 9) in no more than an hour. The chickadees seem to show some preference for the firs.

A. Good  
1980

Mtn. Chickadee

2  $\frac{1}{4}$  mi. S +  $\frac{1}{2}$  mi. W Ingham Plk., 2000 m., San Bernardino Co., Calif. [T. 2N, R. 2W]

29 July Chickadees again thick here. Lots of flocking young birds.

Black Mtn. Area, 1740+1820 m., Pasadena Co., Calif. [T. 4S, R. 2E]

30 July Chickadees again quite common + flocking. Song here seems normal, perhaps slightly higher on 3rd note.

4  $\frac{1}{2}$  mi. S +  $\frac{1}{4}$  mi. E Pine Mtn., 1710 m., San Diego Co., Calif. [T. 15S, R. 5E, SE  $\frac{1}{4}$  sec. 20]

1 August Chickadees sound normal, but with odd (prob. juvenile) songs. It is hard to say.

Costa Rica

• Amastidium velliferum

Cascante Camp

15 April

One collected just inside 1° forest, ca 700 m elev On ground

1986  
D.A. Good

## Anneiva festiva

Trail from Río Peje to La Cantarrana camp

2 April

Several seen along road, while walking into La Cantarrana.  
None collected. In pasture

4 April

One collected 8:25 AM in open grass near camp shelter - Foraging in sun. Two seen, 1 collected along trail to Río Guacimo, ca 1 km from ~~La~~ Cantarrana, in grass + under vegetation at edge of clearing around trail. 9:30 AM.

Cascante camp

5 April

One caught in mammal snap-trap. Waiting for us when we arrived in camp.

8 April

Several seen among rocks + boulders where the Río Cascante disappears below ground just downstream from camp. Ca 100 PM.

9 April

One collected in depression under log in pasture E of camp. Ca 1030 AM.

1986

D. A. Good

Anadia orellata

1000 m camp

15 April

One collected ca 3 m off ground on loosely hanging  
moss-covered 1 cm diameter branch on broken-off tree.  
In 1<sup>st</sup> forest, collected in AM, in daylight. The lizard was  
in the open + not very wary.

1986  
A. Good

Anothea spinosa

1000 m camp

12 April

One collected at 1050 m in low vegetation in <sup>10</sup> forest  
along trail to Hartshorn's forest plot. Collected at night.

Catolopus sever

~~Trinidad 12050-12090m~~

SE slope "1st Maria"

25 April 5 collected in daylight along streams at 2070, 2300 + 2330 m.

26 April 1 collected in stream near camp in morning

1986  
D.A. Good

Atelopus varius

Cascante camp

7 April 1 collected on large fallen log ca 2 m above l<sub>2</sub>O over Rio Cascante at ca 700 AM. In open.

Trail from Cascante camp to 1000 m camp

7 April 1 collected on floor of l<sup>o</sup> forest - not particularly near water

1030 m elev. Stream above 1000 m camp

11 April 1 collected ca 400 PM on rock in stream. The frog was sitting in the open just above water line + made no attempt to escape. In l<sup>o</sup> forest.

Two more were given to us by one of the park guards who came by in the afternoon. These came from the 1500 m site. Male + female in amplexus.

12 April Another collected in same ~~stream~~ river (1030 m) - half submerged clinging to a rock - collected in daylight.

1000 m camp

12 April 1 collected on rock at edge of stream below camp, ca 950 m elev. The frog was ca 1 m above the water on a little rock overhung by another larger one. It made no attempt to escape. Collected in early afternoon.

Trail from 1000 m to 1500 m camps

14 April 1 collected in middle of trail at 990 m - on edge far from water. All Atelopus so far except 1 in amplexus were ♀♀.

Atelopus varius

1500 m camp

15 April 2 collected along river below camp in daylight.

16 April 2 collected on 1<sup>o</sup> forest floor in daylight.

Trail from 1000 m camp to 1500 m camp

16 April 1 collected + another seen in 1<sup>o</sup> forest on ground ca 1230 PM  
at 1420 m elev.

1500 m camp

18 April 1 male collected from leaf ca 4 m off ground in 1<sup>o</sup> forest.  
Night. ca 10 m from Río San Rafael.

19 April 1 male collected on ground - 1<sup>o</sup> forest ca 10 m from Río  
San Rafael. Daylight.

1986  
D.A. Good

Basiliscus plumifrons

La Cantarana camp

2 April

One ~~ca~~ ca 2m off ground sleeping at night in vegetation along bank of Rio Cantarana upstream from camp. 8-10 PM.

4 April

One seen at edge of forest surrounding pasture ca. 1 km back up trail to Rio Peje (and to La Selva). ♂ con. rock in creek - ran into bushes. ~~ca~~ <sup>ca.</sup> 4:30 PM

Rio Peje, at roadhead to Cascaete camp

8 April

Several of the members of the expedition saw an adult run across the ~~river~~ river. Robin Chagden told me about it.

1986  
D.A. Good

Bolitoglossa ~~sp.~~ "subpalmata"

1500 m camp  
19 April One juvenile Bolitoglossa taken from a bromeliad on ridge opposite camp. Bromeliad was ca 2 m off ground + salamander was on one of inner leaves (ca  $\frac{1}{3}$  way from middle to outside). This was bromeliad 2 of 24. collected ca 2 PM.  
~~Later~~ <sup>later, during</sup> night Craig found an adult of probably the same species - dark venter with light spots - about  $1\frac{3}{4}$  m off ground on loose moss hanging from trunk of large tree. collected ca. 8 PM.

1800 m camp  
21 April 2 adults collected in forest in daylight. One was buried deeply in the mulch at the base of a large bromeliad 6 m above the ground in a tree. The other was in thick, wet moss on a ~~small~~ fallen log.

2050 m camp  
23 April One collected under thick moss on a fallen log in pasture. Another behind a loose piece of earth on a <sup>vertical</sup> road cut. Checking this road cut at night yielded nothing + the same was true of tearing it apart on the 24<sup>th</sup>. The salamander was ca 2 m off the ground on a vertical earth face.

Trail from 2050 to 2600 m  
23 April One collected under moss on a log at 2300 m elev.

Bolitoglossa colonnea

1500 m camp

12 April

One collected at ca 700 PM by headlamp on the upper side of a fern ~~frond~~ frond ca  $1\frac{1}{2}$  m off the ground in the 1° forest along the ridge which the trail to 1500 m follows. It was just N of the junction of the spur trail to the 1000 m camp.

Weather was drizzly + misty - leaf surfaces very wet.

1986  
A. Good

Eleutherodactylus altus

1000m camp

10 April

2 collected at night in 1° forest at 990m elev.

12 April

1 collected on ground in AM in 1° forest at 960m elev.

Another collected at night in low vegetation in 1° forest at 990m elev. along trail to Hartshorn's forest plot.

13 April

One collected in low vegetation in 1° forest at 960m elev.  
Night.

1986  
D.A. Gould

Eleutherodactylus andi

1000 m camp

12 April

One collected at night in 1° forest on top of a 1<sup>m</sup> diameter fallen log.

13 April

One collected ~~at night in 1° forest~~ on low vegetation, 960m elev.

Trail from 1000 m camp to 1500 m camp

14 April

1 very large individual collected in daylight from rock in middle of river at 1030 m elev.; 1° forest

1986  
D.A. Gove

Eleutherodactylus biporcatus

Trail from La Cantanara to Casante Camps

5 April

4 collected on forest floor between 350 and 520 m elev. between 10 AM and 305 PM.

Quebrada Covalonga

9 April

5 collected on floor of 1° forest on ridge E of Quebrada, 2 at 590 m elev, 3 at 660.

1986  
D.A. Good

Eleutherodactylus bransfordi

La Cantarrana Camp

3 April 4 collected on ground in AM in forest along trail to 700 m camp, ca 1 km from La Cantarrana.

Trail from La Cantarrana to Cascante camps

5 April 8 collected on forest floor between 350 and 450 m elev. between 10 and 1145 AM.

7 April

Trail from Cascante camp to 1000 m camp

3 collected on floor of 1° forest between 815 and 1000 m elev.

8 April

2 collected during day in 1° forest.

Quebrada Covalongo

9 April

4 collected on floor of 1° forest on ridge E of Quebrada at 580, 580, 580 and 630 m elev.

Trail from 1000 to 1500 m camps

12 April

3 ~~2~~ collected on 1° forest floor at 1040, 1100 and 1130 m elev.

1000 m

~~La Cantarrana~~ Camp

12 April

One taken from stomach of a small Imantodes canhwa collected at night in 1° forest.

13 April

1 collected at night in low vegetation in 1° forest. 960 m elev.

Eleutherodactylus transfordi

Trail from Casavate Camp to 1000 m Camp

15 April

2 collected on 1<sup>st</sup> forest floor in daylight.

1986  
D.A. Good

Eleutherodactylus caryophyllaceus

5 April Trail from La Cantanera to Cascaute camps,  
3 collected between 350 and 460 m elev. on forest floor  
between 10 AM and 12:5 PM.

8 April Trail from Cascaute to 1000 m camp  
1 collected at night in 1° forest, 30 cm off ground at 720 m  
elev. Another collected in 1° forest at 750 m elev. during day.

12 April 1000 m camp  
4 collected at night in low vegetation in 1° forest. at  
960, 970, 1000 + 1040 m elev. The animal at 1040 m  
was found with a clutch of eggs.

13 April 6 collected in low vegetation at night in 1° forest at 960,  
960, 960, 980, 1000 + 1020 m elev.

1986

Good

Eleutherodactylus cerasinus

Trail from La Cantarrana to Cascante camps

5 April

Four collected on floor of 1° forest between 350 and 470 m elev. between 10 AM and 12:10 PM.

Trail from Cascante camp to 1000 m camp

8 April

One collected in 1° forest at 700 m elev. 2 m off ground, coll. at night.

Quebrada Coralonga

9 April

3 ~~2~~ collected on floor of 1° forest, one on ridge between Quebradas Coralonga + Las Juntas, 540 m elev, and the other 2 on the ridge E of Quebrada ~~to~~ Coralonga, 580 m.

1986  
A. Good

Eleutherodactylus crossidigitus

1000 m camp

10 April

1 collected at night in 1° forest at 990 m elev

11 April

1 collected in 1° forest at 975 m elev. collected by day.

12 April

3 ~~2~~ collected in 1° forest at night on low vegetation.  
6 more in similar circumstances on trail to Hartshorn  
forest plot, 1000-1050 m elev.

13 April

8 more collected at night in 1° forest in low vegetation at  
960, 960, 960, 980, 980, 990, 1000 + 1020 m.

1986  
D.A. Good

Eleutherodactylus crientus

La Cantarana Camp

3 April

1 Collected by headlamp ca 30 cm above ground on bank of Río Cantarana above camp.

Trail from Cascante to 1000 m camp

7 April

One collected from tiny bromeliad ca  $1\frac{1}{2}$  m off ground on vine 1 cm diameter. This specimen seems odd to Craig + Federico + we are referring to it half jokingly as "sp. nov." This was ca 1100 AM, 730 m elev.

Another strange crientus was collected at night on a leaf ca.  $\frac{1}{2}$  m off ground by headlamp. This one was ca 800 PM, just inside the 1° forest S of Cascante camp.

Also 1 'normal' crientus collected at about this same time & place.

8 ~~April~~ April

One collected in 1° forest 2 m off ground at 700 m elev. Coll. at night.

1000 m camp

10 April

2 collected at night in 1° forest at 960 m and 990 m elev.

12 April

One collected in low vegetation in 1° forest at night. 2 more in similar circumstances at night along the trail to Hantschov's forest plot.

13 April

3 collected in low vegetation in 1° forest at night at 960, 960 + 1000 m elev.

1986

J. A. Good

Eleutherodactylus chasteus

La Cantanara camp

32 April

Collected along Río Cantanara ca 8:00-10:00 PM in vegetation ca  $1\frac{1}{2}$  m off ground on river bank. Calling. Downstream from camp. Several others heard at night

Trail from Carante camp to 1000 m camp

7-8 April

- Many heard in forest at night, only 1 collected on night of 8 April ca 2.3 m off ground on under surface of small ~~leaf~~ leaf - calling. Another seen  $1\frac{1}{4}$  off ground on trunk of palm. Both in 1° forest.

1000 m camp

10 April

1 collected at night in 1° forest at 990 m elev.

Trail from 1000 m to 1500 m camps

11 April

2 collected in PM in 1° forest at 975 and 1020 m elev.

1000 m camp

12 April

One collected in daylight from bromeliad ca 2 m above ground in 1° forest. 3 others collected by headlamp at night perched on vegetation in 1° forest. Four more collected on vegetation at night along trail to Hartshorn's forest plots.

13 April

9 collected at night in low vegetation in 1° forest at 960, 960, 960, 960, 960, 960, 960, 1000 and 1000 m elevation.

1986  
D.A. Good

Eleutherodactylus diastema

1000 m camp  
15 April One collected inside 1000 m shack at ca 800 AM.

1500 m camp  
15 April One collected in 1° forest.

16 April Several heard from camp at night

17 April One collected at night in 1° forest in low vegetation. This + the specimen from 15 April look very different from diastema from 1000 m.

18 April 3 collected at night. - Craig thinks they sound slightly different than lower diastema as well.

19 April 1 collected at night in vegetation in 1° forest.

1800 m cabin  
20 April 1 collected at night in low vegetation in 2° forest. This one looks more like normal diastema from lower elev. → different from 1500 m animal - perhaps a different sp. in extremely wet area around 1500 m.?

1986  
D.A. Good

Eleutherodactylus <sup>osuses</sup> ~~angelus~~

Trail from 1000 m camp to 1500 m camp

16 April 1 collected on floor of 1° forest at 1:00 PM 1460 m elev.

1500 m camp

16 April 9 more collected in similar circumstances in daylight.

17 April 3 collected in daylight on 1° forest floor. ~~Many more seen but not collected.~~

18 April 1 collected on muddy slope beside camp. Daylight

19 April 2 collected on ground in 1° forest near camp. Daylight. Many more seen but not collected.

1800 m cabin

20 April 1 collected at night in 2° forest.

21 April 1 collected in daylight on forest floor.

2050 m camp

23 April 1 collected under unclear circumstances.

Eleutherodactylus fitzingeri

La Cantarrana camp

2 April One collected ca 8 PM ca  $\frac{1}{2}$  m off ground in vegetation along edge of Río Cantarrana upstream from camp. Another collected 8-10 PM downstream from camp on rock in middle of Río Cantarrana. Several others heard in night,

4 April One collected at night along Río Cantarrana.

Trail from La Cantarrana to Cascante camps,

5 April 1 collected at 500m, 2:10 PM. On forest floor.

Cascante camp

7 April These seem to be fairly common in the pastures around Cascante camp - we hear them calling almost constantly. Several were collected, mostly at night or early in the morning. One was caught in a mammal snap trap.

9 April 2 collected in pasture E of camp. 12-2 PM, 700m elev. In grass. Others heard at night around camp.

~~11~~

1000 m camp

11-16 April Heard periodically around camp.

12 April 2 collected at night in low vegetation. One in 1° forest + 1 in open area around camp. Both 960m.

13 April 1 collected at night in 1° forest in low vegetation at 960m elev.

1986  
DAGood

Eleutherodactylus hylaeformis

~~#~~ 1500 - 1800 m camp

15-20 April

The specimens referred to as strange looking E. diastema are actually E. hylaeformis. See accounts for diastema.

~~20 April~~

1800 m camp

21 April

1 collected at night in low vegetation.

2050 m camp

23 April

2 collected at night in forest.

25 April

1 collected along trail to 2600 m in daylight - from bromeliad.  
Another collected on low vegetation in forest at night Arecan  
camp.

Eleutherodactylus melanostictus

1500 m camp

17 April

7 collected at night in low vegetation in 1° forest

18 April

6 ~~7~~ collected - same conditions. One juv. from a moss mat on a branch (horizontal - ca 5 cm diameter) 1½ m from ~~the ground~~ ground in daylight.

19 April

2 collected at night in low vegetation in 1° forest.

~~2~~

1500 m cabin

20 April

1 collected at night in low vegetation in 2° forest.

21 April

3 collected in woodpile outside cabin. Daylight. - all juveniles.

1986  
J.A. Good

Eleutherodactylus minus

Trail from 1000 m to 1500 m camp

11 April

1 collected by day in 1° forest at 1000 m elev

1986  
D.A. Good

Eleutherodactylus noblei

Trail from Casiente camp to 1000m camp

8 April

One collected at night in 1° forest at 700m elev. on vegetation  
1m off ground.

~~Eleutherodactylus~~ pocheiferus

Trail from 1000 m to 1500 m camps  
16 April One collected on floor of 1° forest ca 100 PM 1460 m elev.

via 1500 m camp  
17 April 6 collected in daylight 1490-1520 m elev. on 1° forest floor.

18-19 April Very common on 1° forest floor in daylight. Several collected.

Trail from 1500 m camp to 2050 m camp  
18 April Commonest frog seen between 1500 + 1800. Several collected from forest floor.

1800 m cabin  
21 April Common. 2 collected ~~in~~ morning ~~of~~ at edge of clearing around cabin. On ground.

Trail from 1800 m to 2050 m  
21 April 3 collected in daylight on forest floor at 1850 + 1860 m elev.

SE slope "1st Nariá"  
25 April 1 collected on forest floor in daylight at 2240 m elev.

Eleutherodactylus talamancae

2 April Trail from Río ~~Peto~~ Peje to La Carlarra camp  
One heard in heavy woods just E Río Peje. ID by Federico Bulaños

7 April Trail from Cascante camp to 1000m camp  
2-3 heard both just inside + just outside entrance to 1° forest, ca 700m elev. One collected just outside - on leaf ca 1/3 m off ground.

1986  
D.A. Goad

Emulius sceleratus

Cascante Camp

6 April.

One found dead + mangled in water-filled footprint of a cow - obviously stepped on. This was in pasture E of camp, elev ca. 700m.

1986  
DAGood

Geophis hoffmanni

2050m camp

17-24 April 7 collected under moss + in road cuts around camp.

3 juveniles were collected in the vicinity of some empty reptile eggs but these seem too large for Geophis.

1981  
D. A. Gould

Geophis <sup>nuthveni</sup> ~~sp.~~

1500 m camp

17 April

1 collected under a thick moss mat on top of a fallen log ca 1 m in diameter. Collected ca 130 PM in 1<sup>st</sup> forest - but in open due to tree fall.

1986  
J. A. Good

Gymnophis multiplicata

Trail from Escante camp to 1000 m camp

7 April

One collected under log in 1° forest at 940 m elev. I will try to keep this one alive.

1986  
D.A. Good

Hyla angustilineata

1500 m camp

17 April 8 collected at night in low vegetation in 1° forest. - along river.

18 April 1 collected along river at night. all 9 are transforming animals

1800 m cabin

21 April 3 collected at night in low vegetation.

1986  
D.A. Good

Hyla fimbriemembra

1800 m cabin

20 April

I collected at night ca 2 m off ground in 2<sup>nd</sup> forest above cabin (toward 1500 m camp). Just inside forest. Craig thinks this is H. mulicaria, but the boy says fimbriemembra to me...

Very docile - made no attempt to escape when held in the hand at night - possibly confused by head lamps. More active attempts in daylight the next day.

21 April

another collected at night in almost exactly the same spot as the first! - This time hunched up in a bromeliad, ca 2 m off the ground. Both specimens are ~~infested~~<sup>infested</sup> with lice.

1986  
DAGood

Hyla pseudopuma

2050m camp

23-24 April Very common - 10 collected in + around buildings in camp, a couple of them in the kitchen. 5 were taken from bromeliads on the 24th. - They were dark green when collected but changed to the dull brown-green of the others soon after capture.

25 April Abundant - breeding in every water-filled pothole + creek at night. Weather misty. Several collected.  
Eggs everywhere next morning

1986  
D.A. Gould

Hyla rivularis

1800 m cabin

20 April

5 collected at night in low vegetation in 2° growth forest and at edge of clearing around camp. Some, at least, close to stream.

21 April

3 collected at night in low vegetation in forest. - Other heard along stream.

Hyla tree

1500 m camp

17 April

1 collected at night in 1° forest near Río San Rafael downstream from camp. ca. 1 m above ~~gravel~~ Río San Rafael. - on rock.

18 April

1 collected in low vegetation, 1° forest, at night.

1986  
D. A. Good

Hyla uranochroa

Trail from 1000 m camp to 1500 m camp

11 April

One collected in the afternoon in a bromeliad ca 2½ m off the ground in 1° forest. Unlike Eleutherodactylus in similar situations, the Hyla did not try to escape - it just sat ~~hunched~~ hunched up in a leaf axil with its red eyes closed. - trying to be cryptic.

~~11~~

1000 m camp

12 April

6 collected at night in 1° forest. One was ca 2½ m off the ground + had to be shaken loose from the small tree in which it was found. The others were in low vegetation. Elevations 960-1010 m.

13 April

2 collected at night in low vegetation in 1° forest. 960 m elev.

1500 m camp

15 April

1 collected in 1° forest in daylight. Conditions unknown.

Trail from 1500 m to 2050 m camp

20 April

1 collected in afternoon in vegetation at 1840 m elev.

1800 m cabin

20 April

1 collected at night in low vegetation in 2° forest.

1986

D.A. Good

Imantodes cinchona

La Cantarrana camp

3 April

One collected by headlamp ca 2m above water along Río Cantarrana upstream from camp. In vegetation. Active

1000 m camp

12 April

3 collected in low vegetation in 1° forest at night. 2 near camp (960m), 1 at 1030 m on trail to Hartshorn's forest plot. One had an Eleutherodactylus bransfordi in its stomach.

13 April

2 more collected at night in low vegetation in 1° forest. 980 and 1000 m elevation.

1986  
A. Good

Imantodes inornatus

La Cantarrana Camp

3 April

1 collected by headlamp along Río Cantarrana above camp.  
In vegetation ca 3 m above water. Active.

1986  
2A Good

Leimadophis epinephelus

Trail from 1500-2050m

18 April

~~2~~ One collected 1700-1800m by F. Muñoz + D. Robinson.

1986  
A. Good

Lepidoblephanus xanthostigma

1030 m stream above 1000 m camp

11 April

One dug out of a moss covered bank at the edge of the river. Collected ~~in~~ ca. 3-4 PM. 10 frost.

Leptodactylus melan<sup>not</sup>us

1000 m camp

15 April

1 collected on ground in clearing near 1000 m shack.  
Another in the "outhouse" - not collected.

1986  
D.A. Good

Leptodactylus pendadactylus

La Cantarana Camp

4 April

One collected ~~ca~~ in the afternoon in a pasture ~1 km from La Cantarana camp toward Río Peje and La Selva.

Leptodeira septentrionalis

Trail from Cascaete to 1000m camp

8 April One collected ca 1½m off ground in 1° forest at 730m elev.  
Coll. at night

1986

D. A. Good

Leptoprin depressivus

Cascante Camp

5 April

One collected by mammalogists + waiting for us when we arrived in camp.

Trail from Cascante camp to 1000 m camp.

7 April

One collected ca 800 PM ~~at~~ sleeping ca  $1\frac{3}{4}$  m off ground lying along branch of small tree. This was in 2° growth just S of entrance to the 1° forest.

Cascante Camp

12 April

2 collected in pasture in <sup>PM</sup> ~~at~~. Active, foraging on open ground near cookhouse.

1986  
D.A. Good

Mesaspis monticola

2050m <sup>camp</sup> ~~alt~~

14-24 April 6 collected in pastures around camp. - Daylight.

25 April 3 collected in pasture in daylight. Often under boards + logs - much like other alligator lizards.

1986  
D.A. Good

Micromys negrocinctus

Cascante camp 700m.

9 April

One collected ca 100 PM under a deeply buried log in pasture - E of camp on trail leading to a couple of houses a ~~couple~~ km or so from camp. ~~PM~~

12 April

One collected in PM inside kitchen area of warehouse.

1986  
DA Good

Ninia ~~sp.~~ psephota

1500 m above

21 April

1 collected at night active on low horizontal branch ca  
10 m above ground.

1986  
D.A. Good

Nourpsaltae

1800m cabin

20 April 2 collected at night sleeping at the tips of dead fallen branches in slashed-over 2° forest. ca. 1 m off ground. One escaped next morning while being photographed.

2050m camp

20 April 2 collected - circumstances unknown to me

25 April 1 collected on fern leaf ca  $\frac{1}{2}$  m off ground at edge of roadbank - in open but near forested stream. Night.

1986  
J.A. Good

Norops biporcatus

Trail from Casante to 1000 m camp

11 April

1 collected in daylight in 1° forest at 700 m elev. Just inside forest.

15 April

1 collected at 790 m elev. on 1° forest floor in daylight.

1986  
A. Good

Norops cepito

6 April Trail from Cascante camp to 1000 m camp  
One collected on mossy log in 1° forest.

8 April One collected at night asleep on a vertical tree trunk ca 2 cm in diameter, 2½ m off ground. In 1° forest, 730 m elev.

1

1986  
D.A. Good

Norops carpenteri

Trail from La Cantarana to Cascaote camps

5 April

2 collected on trunks of small trees, one betw. 350 + 400 m elev and the other at 460 m. The lower elev. specimen was collected ca 1000 AM, the higher at 1145, both in 1° forest away from streams (on slopes or ridges).

1000 m camp

13 April

One tiny juvenile collected in 1° forest.

1986  
A. Good

Nowops humilis

La Cantarrana camp

2 April One ca 20 m into forest along trail toward 700 m camp (near 16 km marker). On ground 1730 h.

3 April 3 collected in AM on forest floor along trail to 700 m camp ca 1-2 km from La Cantarrana. Another collected 12-2 PM in similar habitat along trail to Río Guacimo.

4 April 1 collected ca 1 m off ground on trunk of large tree in forest above trail to Río Cantarrana, ca 1 km from La Cantarrana. 10:00 AM

Trail from La Cantarrana to Cascante Camps.

5 April 4 collected from forest floor or on low vegetation between 350 and 400 m elevation in AM (after 10).

Trail from Cascante camp to 1000 m camp

6 April 3 collected in 1° forest.

Cascante camp

6 April 1 collected  $\frac{1}{2}$  m off ground on <sup>large</sup> stump in open pasture ~ 10 m S of plastic shelter in camp.

Trail from Cascante camp to 1000 m camp

8 April One ♂ coll. during day on roof support of cabin at 1000 m camp (990 m elev.). Another during day along Quebrada Canajal (730 m).

9 April One collected in AM in 1° forest.

1986  
D.A. Good

Noreps humilis, (cont')

Quebrada Corralonga

9 April 3 collected on floor of 1° forest, ~~one~~<sup>two</sup> along the Quebrada Corralonga (490m elev) and the other on the ridge to the east, 630m elev.

Trail from 1000m to 1500m camps

12 April 2 collected on 1° forest floor at 1080 and 1180m elev. in daylight.

Another collected in similar circumstances near the 1000m camp at ca 960m.

Several others seen but not collected.

1986  
A. Good

Norops lemurinus

La Cantarana camp

4 April

One collected  $1\frac{1}{2}$  m off ground on trunk of large tree  
in pasture  $\pm$  1 km N of camp on trail to Río Peje +  
La Selva. ~ ~~5:00~~ 5 PM.

Cascante camp

10 April

One collected in AM on wall of corralhouse in camp.

11 April

One collected in AM on wall of outhouse.

1986  
D.A. Good

Nourps limifrons

- 2 April La Cantarruna camp at night. (ca 7 PM)  
1 collected ~~from~~ electrical wire near light bulb in camp.  
Another sleeping ca 1 m off ground on top side of leaf along  
trail to river. <sup>downstream from</sup> ~~of~~ camp. Also night (8-10 PM)
- 3 April One collected ca 2 m above ground in forest ca  $1\frac{1}{2}$  km from  
La Cantarruna along trail to 700 m camp. AM. On branch  
ca  $\frac{1}{2}$  cm diameter.
- 4 April One collected ~~ca~~ ca 1 m of ground on stems of plant  
immediately beside shelter in camp. 2 others seen.

1986

D.A. Good

Nowps oxylophus

La Cantanana Camp

2 April 2 collected on rocks in middle of Río Cantanana, upstream from camp. Collected 8:00-10:00 PM. One perched at water's edge with tail dragging in H<sub>2</sub>O. Probable that another had jumped into the water on my approach.

3 April Several collected along banks of Río Cantanana upstream from camp. On ground at banks and on rocks in midstream.

~~La Cantanana~~ Cascante Camp

5 April 1 collected at night on rocks in Río Cascante just below camp.

7 April One collected by headlamp at night along the Río Cascante

8 April Several seen among boulders below point where Río Cascante disappears below ground. One collected ca 130 PM on rock in middle of stream of Cascante. When picked up, it held its arms + legs rigid at its sides (pretending to be a stick?).  
Another collected at 950 m elev on a rock in the stream below 1000 m cabin. Coll during day.

1000 m camp

11 April One egg, probably of this species, found in a moss mat on a boulder in the stream below camp. 1° forest.

Trail from 1000 m to 1500 m camp

12 April Another egg collected in similar circumstances at 1100 m. Also a specimen collected from a rock in the stream at 1030 m.

Nourps tropidolepis

1500 m camp

16 April 2 collected on 1° forest floor around camp clearing ca 230 PM.

Trail from 1000 m camp to 1500 m camp

16 April One collected on 1° forest floor at 1460 m elev. ca 100 PM.

1500 m camp

17 April One collected at night in low vegetation in 1° forest.

18 April 2 collected at night in low vegetation in 1° forest.

Trail from 1500 m to 2050 m camp

18 April 2 collected on 1° forest floor in afternoon at 1570 m elev.

1500 m camp

19 April One collected 1° forest floor, daylight.

1800 m cabin

20 April 1 collected at night in 2° forest.

21 April Very common, 6 collected in forest.

Trail from 1800 m to 2050 m cabin

21 April 9 collected between 1800 + 1875 m elev. on forest floor + low vegetation.

~~2050 m~~ 2050 m camp

19-23 April Many collected in forest + pasture - see catalogue.

1986  
DA Good

Norops tropidolepis

Trail from 1800 to 2050m

21 April

This is by far the commonest lizard along the transect above 1500m - so far. 9 collected along trail on ground + in low vegetation between 1800 + 1875m elev.

2050m camp

17-24 April Very common - 15 collected in forest + pasture around camp. We have stopped collecting them.

1986  
A. Good

Nototriton piadovi

1000m camp

11 April

4 collected ~~in~~ in 1° forest along stream valleys. The first was collected by C. ~~Grey~~ Greyer under loose moss ca 1.5 m off ground on a vertical tree trunk beside the river <sup>(1030m)</sup> ca 1 km S of 1000 m camp along trail to 1500 m camp. This was collected in AM. In the PM, Craig + I walked back toward the site of this collection. Immediately across the stream below camp (960 m elev), we found another under a thick layer of moss ~~on~~ ca 3/4 m off ground on a fallen log. Two more were subsequently collected at the 1030 m site under loose moss, bromeliad + ferns on a vine overhanging a pool at the side of the river (ca 1 m over water). These two were together (one large + 1 small).

While I was concentrating on thick, wet moss on logs, stumps + rocks, Craig ~~was~~ appeared to be concentrating on looser, dryer moss on vertical trunks. It seemed to be having more ~~luck~~ luck + this may suggest something about microhabitat, although the small sample makes this anything but certain.

We also looked in whatever bromeliads were accessible, but bromeliads seem to be less common along the streams than on the dryer ridgetops. - Found nothing in these.

13 April

The tiny specimen from 960 m was found dead + was preserved today - it may have been injured when collected.

1986  
D.A. Good

Nototriton picadori

Trail from 1000 to 1500 m camps

16 April

2 collected in moss on a tree ca.  $\frac{3}{4}$  m in diameter - both ca  $\frac{1}{2}$  m off ground. This was beside the trail along a ridge top at ca 1310 m elev. - Unlike below, moss is thicker here, even on the ridges. Nototriton appears to be more often in the moss than under it against the bark.

~~4 collected in moss on trees, although the exact conditions are not known - These were found in the moss that we collected for our beds - the Nototriton (and a couple of Centrotenebris) were inadvertently collected as well.~~

1500 m camp

16 April

4 more collected in moss on trees, although the exact conditions are not known - These were found in the moss that we collected for our beds - the Nototriton (and a couple of Centrotenebris) were inadvertently collected as well.

17 April

5 collected in 1° forest in PM, daylight. All but 2 were ~~in~~ <sup>in</sup> moss on tree trunks, varying from 2 cm to  $\frac{3}{4}$  m in diameter. ~~These were~~ All were single specimens. The other 2 were together on a horizontal branch ca  $\frac{1}{2}$  m off the ground. They were on a bare patch on the branch, not on moss + were in close proximity.

All Nototriton are collected between 0 + 2 m ~~to~~ off the ground - this is  $\pm$  the height we can reach - they probably go up into the canopy (?).

18 April

4 more collected from moss on trees. 2 were from ~~moss~~ moss on the ground.

19 April

1 collected from moss on tree ca  $1\frac{1}{2}$  m off ground, seen to be on trees & vines of any diameter.

1986  
DAGood

Nototriton puadovi

1800 m camp

21 April

1 collected ca  $1\frac{3}{4}$  m above ground under moss on a vertical tree trunk in 2° forest ~~which~~<sup>under</sup> which someone had cleared all the underbrush.

Another collected at night on a leaf in forest - ca. 10 cm above the ground. ~~There~~

2050 m camp

16 April

1 collected under moss in a hole in a stump in pasture at the roadhead to 2050 m camp.

23 April

3 collected under moss on fallen logs in open pasture

1986  
D.A. Good

Nototriton richardi

1500 m camp

17 April

One + probably 2 (one is small) collected by C. Guyer on ridgetop across Río San Rafael from camp. Elev. 1520m. Both in 1° forest, one under leaf litter, one under moss on the ground. Both in PM, daylight.

Perhaps there is a microhabitat difference between picadori + richardi, with richardi (with smaller feet) being a ground dweller + picadori a tree dweller. Road cuts might be an interface between these habitats, as both are found there.

19 April

Two found in leaf litter - this time in valley of Río San Rafael - not on ridgetop opposite camp as with other 2. Again, these were from leaf litter on the forest floor. Also again, 2 animals together - seems to be a common occurrence in Nototriton.

1800 m camp

21 April

2 collected in leaf litter at the base of a large tree in 2° growth forest from which the understory had been recently cleared. N. richardi always seems to be found in 2's!

1986  
D A Good

Oedipina poelzi

2050m calan

22-24 April 6 collected in open pasture. One was under a brick immediately outside the main house. The others were under moss on and at the base of large logs.

Another was seen by Federico Muñoz + Doug Robinson a few days before ~~at~~ at the base of an earth wall along an abandoned trail inside the forest. - ca 2020m elev.

25 April 2 collected by C. Guyer. One was ca 1½ m high in moss on a vertical road bank.

1986  
D.A. Goad

Oxybelis aeneus

La Cantarana camp

4 April

One collected on ground on trail to Río Peje + La Selva,  
ca.  $\frac{1}{2}$  km from camp. 3:10 PM. Impressive threat  
display while being photographed.

1986  
D.A. Good

Oxybelis brevirostris

La Cantarrana camp

2 April One on upper surface of large leaf ca 1½ m off ground along bank of Río Cantarrana upstream from camp. Collected ca. 9:30 PM.

3 April One collected 3 m above Río Cantarrana in small tree. Collected at night by headlamp.

Carbajal

1986  
A. Good

Phyllomedusa lemur

1000 m camp

12 April

1 collected at night in 1° forest. Perched across branch  
of fallen bush ca  $\frac{1}{2}$  m off ground.

1986  
D.A. Good

Rana palmipes

La Cantarrana camp

3 April

Tadpoles common along edges of Río Cantarrana above camp. Several collected. Possibly some microhabitat differentiation between this sp. and Rana warszewitschii in the same streams. R.w. appears to be restricted to pools isolated from the main flow while R.p. tends to be more along the edges of open-flowing stream.

~~Elkayes~~

Río Toña, 500m, on trail from La Cantarrana to Cascante camp

5 April

Many tadpoles seen in river from 2 cm to 30 cm depth. 3 collected 3:15 PM. River marks boundary of 1° forest and overgrown pasture.

Trail from ~~La~~ Cascante camp to 1000m camp

8 April

2 tadpoles collected in the Quebrada Carvajal at ca 700m<sup>ish</sup>. Other tadpoles, probably of this species in ~~the~~ most of the streams near camp.

1986  
DA Good

Rana vibicaria

1800m cabin

21 April

2 collected on ground in forest. Daylight

Trail from 1800m to 2050 camp

22 April

2 collected ~~on~~ on ground in forest. Daylight 1870m elev.

2050m camp

24 April

1 collected in daylight. Conditions unknown to me.

25 April

2 collected in wet pasture ~~in~~. Night. 2 others collected in wet pasture in daylight.

Rana warszewitschii

La Cantarrana Camp

2 April Tadpoles very common in pools + backwaters along Río Cantarrana. 12 collected 8-10 PM upstream from camp.

3 April Several more tadpoles collected in Río Cantarrana upstream from camp. Very common. PM

Cascante camp

5 April 1 collected at night on rocks in Río Cascante just below camp.

Trail from Cascante camp to 1000 m camp.

7 April One collected at 795 m elev. in 1° forest. Well away from streams.

Quebrada Corralongo

9 April 1 tadpole collected in stream in 1° forest at 490 m elev. Also in stream were hybrid tadpoles.

Trail from Cascante to 1000 m camp

10 April One collected 4-6 PM on floor of 1° forest at 715 m elev. On ridge well away from water.

11 April Another collected in similar habitat. Elevation unknown.

1986  
DA Good

Rhadinosa calligaster

2050m camp

23 April

4 collected under moss along the edges of large logs in open pasture.

25 April

2 collected under logs in pasture in daylight. Both were much browner than the others collected + DBW expressed doubt as to their ID.

1986  
D.A. Good

Rhadinaea guntheri

1800 m cabin

20 April

1 collected at night active on ground in clearing around cabin.

1986  
D.A. Good

Scaphiodontophis venustus

Trail from La Cantanera to Cascante camp

5 April

One collected at summit of 7th ridge S of La Cantanera. (coll. 380m, 1030 AM). Seen on top of leaf litter on forest floor + chased under roots of palm (sp?).

9 April

Trail from Cascante camp to 1000m camp.

One collected in leaf litter in AM in 1° forest. Was on the open when seen - sat there long enough to be photographed then disappeared under roots - was found coiled up in small crevice. This animal had a Skink or Celestus in its stomach.

1986  
DAGood

Sceloporus malacothrix

2050m camp

23 April 2 collected in morning under logs in open pasture.

25 April 1 collected in pasture in daylight.

1986  
D.A. Good

Smilisca phaeota

Cascante Camp

15 April

2 collected at 700 m camp. Given to us by others on expedition

1986  
D. A. Good

Smilisca sordida

La ~~Cata~~ Cantarrana Camp.

2 April

3 specimens collected at night along Río Cantarrana upstream from camp. All on vegetation on stream bank - 2 ca. 1 m off ground + the other ca 2½ m up. Collected between 8:00 and 10:00 PM.

3 April

One calling from vegetation ½ m above water along Río Cantarrana upstream from camp. Collected at night by headlamp. Another collected ca ½ m above rocks along Río Cantarrana. Same night. Not calling.

4 April

3 collected at night along the Río Cantarrana. Two of these were in anaplexus when collected (by Chris d'Orgeix).

6 April

Trail from Casante Camp to 1000 m camp  
1 collected in 1° forest on forest floor.

1986  
D.A. Good

Sphaerodactylus homolepis

La Cantarrana Camp

3 April

One seen on post of camp shelter ca noon, later caught.

4 April

One collected on fencepost in camp. ca 4:00 PM

1986  
D.A. Good

Sphenomorphus cherei

La Cantanara camp

2 April

One seen on trail from Río Peje, just before La Cantanara.  
Not collected. Adult.

3 April

1 collected in forest (on ground) along trail to 700m camp,  
ca 1½ km from La Cantanara.

4 April

2 collected in AM - one on ground next to water supply  
stream (10 AM) and the other in forest ca 1 km from  
La Cantanara along trail to Río Guacimo (10:30 AM)

~~4 April~~

Trail from La Cantanara to Cascante camp

5 April

1 collected on forest floor at 450m, 1140 AM.

1986  
D.A. Good

Tantilla reticulata

La Cantarrana Camp, 280m elev.

7 April

One collected by G. Hartstrom + brought to us at Cascante  
by Pam Hall.

1986  
D.A. Good

Tantilla sp

Cascante camp

10 April

One collected ca 1030AM on top of same log in pasture that  
the Micromys was collected under yesterday. Active.

1986  
DA Good

Trumetopon gracile

2050m camp

16 April

1 collected but circumstances unclear - this was collected before we arrived at camp.

1986

D.A. Good

Unidentified anuran eggs  
+ tadpoles

La Cantunana camp

4 April

Several dozen eggs seen in small (~30 cm diameter) puddle in muddy spot on road from camp to Río Peze and La Selva. - Road churned up by cattle. These eggs (EP-61) are being kept alive in hopes of hatching. ~ 320 PM.

5 April

Eggs collected yesterday hatched.

9 April

We had a go at identifying the eggs collected on 4 April today - they are still pretty small but we got them tentatively to Hyla. All are alive + well in a plastic bag full of dirty water.

~~4 hylid tadpoles were collected in the stream at La Cantunana~~

Quebrada Corvalonga

9 April

4 hylid tadpoles were collected in the stream in 1° forest at 490m elev. - also in stream were Rana hasscheintschii tadpoles.

Trail from 1000 m to 1500 m camp

12 April

Tadpoles of 2 types collected in river at 1030m in slowly flowing water at the edges of the stream. 1° forest. Some indication that they preferred areas of spring inflow.

D. A. Good  
1987

## Species Accounts

Color notes - Nototriton piadai

DAG 3259 - Volcán Cacao, 1490 m elev.

Similar in general color to Nototriton from Monteverde - back dark ~~to~~ brown, tail reddish brown, sides of head behind eyes reddish brown. Back + <sup>sides</sup> tail flecked with gray streaks - no tan or reddish streaks. Limb insertions reddish brown, otherwise limbs dark brown. Venter dark gray - almost but not quite black - throat slightly paler. Both well supplied with granules.

SUL = 22 mm.

Eye bronze

DAG 3260 - Volcán Cacao, 1490 m elev.

SUL 22 mm. tail missing - regenerating

Similar ~~to~~ to DAG 3259 but back redder, reddish-brown markings almost in chevron pattern. Limb insertions brown.

Eye bronze

DAG 3279 - Volcán Cacao, 1420 m elev.

SUL = 16 mm. Dorsum dark brown, tail + sides of head (temporal region) reddish brown. Tail with streaks of tan but streaking lacking on dorsum. Dorsum with small grayish speckling <sup>hardest at edge of ventral area</sup> (granules?). Limb insertions reddish brown. Venter black, well supplied with granules. Eye bronze.

DAG 3280 - Volcán Cacao, 1420 m

9 eggs in moss on tree trunk, 4 ft up. 2 preserved 22 August.

All seem to be well advanced + we hope to raise some to hatching.

D.A. Good  
1987

## Species Accounts

Color notes - Nototriton picadori

DAG 3290 - Volcán Cacao, Prov. Guanacaste, 1475 m

Ordinary color - dark brown back, reddish tail, dark gray side, black venter with granophores. Limb insertion reddish brown, eyes bronze. No tan streaking + no reddish temporal area.

SUL = 17 mm.

DAG 3291 - Volcán Cacao, 1475 m.

SUL = 17 mm. Similar to 3290 but tannish replacing reddish-brown

DAG 329<sup>2</sup>~~1~~ - Volcán Cacao, <sup>1580</sup>~~1490~~ m

- Generally reddish brown - tail + temporal spots slightly redder. Sides same as dorsum. Otherwise similar to 3290

SUL = 27 mm.

DAG 3293 - Volcán Cacao 1580 m

Same as 3292 - but dorsum even redder

SUL = 23 mm.

DAG 3294 - Volcán Cacao, 1490 m.

Almost identical to 3290 but tail not reddish - similar to dorsum in color. - Venter gray, throat paler. Few Granophores

SUL = 27 mm.

D. A. Good  
1987

Species accounts

Color notes Nototriton pseudoei

DAG 3333 - Volcán Cacao, 1420m

16mm SV. Dorsum + tail reddish brown, tail a bit redder, but not much. No streaking except on sides at gut. with black ventral color. <sup>little there too</sup>

Temporal regions redder than rest of dorsum. Venter black w/ white granophores. Limbs reddish, insertions reddest. Eye bronze.

2033 33
